5 ABSTRACT OF THE DISCLOSURE

10 A distributed collaborative computer system that
supports application sharing is provided that comprises
a plurality of server computers interconnected via a
high-speed link. Client computers can connect to any
15 available server computer and start or join a
conference hosted on either the server computer to
which the client computer is connected or any other
server in the system. As a result, the system and
method of the present invention allow application
15 sharing among an arbitrary number of client computers.
